Tree species

To which species 1, 2, and 3 correspond?

#function foliage.litter * what is Mf? Is some sort of mass (t/ha)? Mass of foliage from the allometries? * to which region correspond the “reg” parameter? * what is the “min” parameter?

functions branch.litter, stump.litter, root.litter, bark litter

Again what is the mass parameter (is that mass)?

function fineroot.litter.tsum

How does the tsum work? I mean, is that cumulative monthly in celsius degrees, right?

function shit.AWEN

which kind of shit the shit.AWEN function works on? Is it cow?

function dwarfshrub.litter

what is “mass”? Mass of what? What are the options “abs” and “bel”?

functions bryof.litter, lychen.litter, grass.litter, herb.litter

as above, what is “mass”?

functions grass.litter and herb.litter

what are the definitions of herb and grass?
